THE COMPLETE GUIDE TO RUNNING FACEBOOK AND INSTAGRAM ADS

A Step-by-Step Beginner's Handbook

Kenneth Chiakwa

Kennessy Ebooks

Preface

I did not start out as a digital marketer. My background is in agricultural science and secondary school teaching, and for years my focus was on farming, research, and helping students understand economics and agricultural science for their WAEC and NECO examinations.

Advertising became necessary rather than optional. When I began publishing practical farming guides and revision ebooks under Kennessy Ebooks, I quickly learned that writing a good book is only half the work. Without a way to reach the right readers, even the most useful guide goes unnoticed. Facebook and Instagram advertising became the tool that let me put my poultry farming guides, and later a poultry training programme, in front of the farmers and students who actually needed them.

That process was not always smooth. I made the same mistakes this book warns you about: unclear objectives, poorly targeted audiences, weak advert copy, and giving up on campaigns too early. I also saw what happens when those mistakes are corrected: lower costs, better engagement, and real sales and enquiries from people who were genuinely interested.

This book is written for the Nigerian beginner who has a business, a product, or a service worth promoting but has never opened Meta Ads Manager before. It uses Naira examples, references tools like WhatsApp Business that Nigerian entrepreneurs already rely on, and breaks the process into steps you can follow in order, rather than assuming prior marketing knowledge.

My hope is that by the time you reach the final chapter and the 30-day action plan, you will not just understand how Facebook and Instagram advertising works, but will have already set up and run a campaign of your own.

About the Author

Kenneth Chiakwa is an agricultural scientist, secondary school teacher, and educational content creator based in Enugu State, Nigeria. He holds B.Sc. and M.Sc. degrees in Agricultural Economics from Enugu State University of Science and Technology (ESUT) and is currently a Ph.D. candidate in the same field.

Alongside his academic and teaching work, Kenneth is a commercial farmer with hands-on experience in poultry production. He is the founder of Kennessy Ebooks, an imprint that publishes practical farming guides and secondary school revision ebooks for Nigerian students and entrepreneurs, sold through Selar and Amazon KDP.

To grow Kennessy Ebooks, Kenneth taught himself to plan, launch, and optimise Facebook and Instagram advertising campaigns, using them to promote his own ebooks and a poultry training programme to real Nigerian audiences. *The Complete Guide to Running Facebook and Instagram Ads* brings together what he learned from that hands-on experience, presented in the same clear, step-by-step style that defines his other educational publications.

CHAPTER 1

Introduction to Facebook and Instagram Advertising

Learning Objectives

At the end of this chapter, you should be able to:

- Explain what Facebook and Instagram advertising is.
- Understand the importance of advertising on Meta platforms.
- Distinguish between organic marketing and paid advertising.
- Identify the benefits of Facebook and Instagram advertising.
- Understand the basic terms used in Meta advertising.
- Prepare for creating your first advertising campaign.

Introduction

Digital technology has transformed the way businesses communicate with customers. In the past, businesses relied mainly on newspapers, radio, television, billboards, and word-of-mouth to promote their products and services. Although these methods are still useful in some situations, social media has become one of the most effective and affordable ways to reach large numbers of people. Today, Facebook and Instagram are among the most widely used social media platforms in the world, attracting billions of users who visit them every month to connect with friends, watch videos, discover new products, and interact with businesses.

For business owners, entrepreneurs, freelancers, farmers, teachers, authors, and service providers, Facebook and Instagram offer an opportunity to present their products and services directly to people who are likely to be interested in them. Unlike traditional advertising, where everyone sees the same message regardless of their interests, Meta's advertising system allows businesses to target specific groups of people based on factors such as age, gender, location, language, interests, education, and online behaviour. This targeted approach helps businesses spend their advertising budget more wisely while increasing the likelihood of reaching potential customers.

What Is Facebook and Instagram Advertising?

Facebook and Instagram advertising is the process of paying Meta Platforms, Inc. to display promotional content to selected audiences on Facebook, Instagram, Messenger, and other placements within Meta's network. Businesses create advertisements through Meta Ads Manager and choose the people they want to reach, the amount they are willing to spend, and the objective they want to achieve. Depending on the campaign, an advertisement may encourage people to

visit a website, send a WhatsApp message, watch a video, download an ebook, register for an event, or purchase a product.

Unlike ordinary social media posts, which are usually seen only by a limited number of followers, paid advertisements can reach thousands or even millions of carefully selected users. This makes Facebook and Instagram advertising one of the most powerful digital marketing tools available to businesses of all sizes.

Understanding Meta

Meta Platforms, Inc. is the parent company that owns Facebook, Instagram, Messenger, and WhatsApp. Instead of creating separate advertising systems for each platform, Meta allows advertisers to manage campaigns from one central platform called **Meta Ads Manager**. This means that a single campaign can appear on Facebook, Instagram, Messenger, Facebook Stories, Instagram Stories, Facebook Reels, Instagram Reels, and other available placements. This integrated system saves time and allows businesses to manage their advertising more efficiently.

Why Businesses Advertise on Facebook and Instagram

Businesses advertise because they want to achieve specific marketing goals. Some businesses want to introduce a new product, while others want to increase sales, generate enquiries, attract website visitors, or build brand awareness. Facebook and Instagram advertising helps businesses achieve these goals by reaching people who are most likely to be interested in their products or services.

For example, a poultry consultant can advertise poultry training to people interested in agriculture, while an author can promote an ebook to readers interested in education or business. A fashion designer can display new clothing collections to people interested in fashion, and a restaurant can promote special offers to people living within a particular city. Because advertisements can be targeted so precisely, businesses often obtain better results than with traditional advertising methods.

Organic Marketing and Paid Advertising

Every business should understand the difference between organic marketing and paid advertising. Organic marketing refers to all promotional activities that do not require payment to Meta. Examples include publishing educational posts, uploading photographs, sharing videos, replying to comments, participating in discussions, and building relationships with followers. Organic marketing is valuable because it helps establish trust and strengthen relationships with customers, but it often requires patience since growth may be slow.

Paid advertising, on the other hand, involves paying Meta to promote content to a selected audience. Paid advertisements allow businesses to reach many more people in a shorter period of time. Most successful businesses combine both approaches by regularly publishing useful

organic content while using paid advertisements to expand their reach and achieve faster business growth.

Benefits of Facebook and Instagram Advertising

One of the greatest advantages of Facebook and Instagram advertising is the ability to target specific audiences. Instead of showing an advert to everyone, advertisers can focus on people who are more likely to purchase their products. This improves advertising efficiency and reduces wasted spending.

Another important advantage is flexibility. Businesses can start with relatively small budgets and increase their spending gradually as they gain experience and confidence. This makes Facebook and Instagram advertising suitable for both small and large businesses.

Meta also provides detailed campaign reports that help advertisers understand how their campaigns are performing. Information such as reach, impressions, clicks, engagement, messages, purchases, and cost per result enables businesses to evaluate whether their advertising investment is producing satisfactory results.

In addition, advertisers can choose from several advert formats, including images, videos, carousel adverts, Stories, Reels, and collection adverts. This flexibility allows businesses to present their products in ways that best attract their target audience.

Common Advertising Terms

Before creating your first campaign, it is important to understand some basic advertising terms. A **campaign** is the overall advertising project that contains your objective and settings. Within each campaign are one or more **ad sets**, where you choose your audience, budget, schedule, and placements. Inside each ad set are the individual **ads**, which contain the images, videos, headlines, descriptions, and call-to-action buttons that people see.

Other important terms include **audience**, which refers to the people you want your advert to reach; **budget**, which is the amount you plan to spend; and **placement**, which refers to where your advert appears, such as Facebook Feed, Instagram Feed, Stories, Reels, or Messenger.

How Facebook and Instagram Advertising Works

The advertising process begins when a business creates an advert using Meta Ads Manager. After selecting a campaign objective, defining the target audience, setting a budget, and designing the advert, the campaign is submitted for Meta's review. If the advert complies with Meta's advertising policies, it is approved and begins appearing to the selected audience. Throughout the campaign, advertisers can monitor performance reports and make improvements where necessary. This process of measuring and improving campaigns is one of the reasons Facebook and Instagram advertising is so effective.

Common Misconceptions

Some people believe Facebook advertising is only for large companies with huge budgets. This is incorrect. Small businesses, freelancers, teachers, farmers, consultants, and authors can also benefit from advertising, provided they define clear objectives and target the right audience.

Another misconception is that every advert automatically produces sales. In reality, successful advertising requires testing, learning, and continuous improvement. Advertisers often experiment with different headlines, images, audiences, and budgets before finding the combination that produces the best results.

Characteristics of Successful Advertisers

Successful advertisers understand that digital marketing is a continuous learning process. They regularly study campaign reports, analyse customer behaviour, test new ideas, improve their advert designs, write better advertising copy, and stay informed about new advertising features introduced by Meta. They also maintain honesty in their advertising by making accurate claims, delivering quality products, and providing excellent customer service.

Chapter Summary

This chapter introduced the fundamentals of Facebook and Instagram advertising. You learned what Meta advertising is, how it works, why businesses use it, and the difference between organic marketing and paid advertising. You also learned the benefits of Meta's advertising platform and became familiar with essential advertising terms that will be used throughout this book. These concepts provide the foundation for the practical skills you will develop in the remaining chapters.

Review Questions

1. Define Facebook and Instagram advertising.
2. Explain the difference between organic marketing and paid advertising.
3. Discuss five benefits of advertising on Facebook and Instagram.
4. What is Meta Ads Manager?
5. Explain the terms Campaign, Ad Set, and Ad.
6. Why is audience targeting important in digital advertising?

Practical Exercise

Choose a product or service that you would like to advertise. Write a short description of the product, identify your ideal customers, explain why they would be interested in your offer, and list three advertising objectives you hope to achieve by promoting it on Facebook and Instagram. Keep your answers because they will be used in the practical exercises throughout this book.

CHAPTER 2

Setting Up Your Meta Business Account and Ads Manager

Learning Objectives

At the end of this chapter, you should be able to:

- Explain the purpose of a Meta Business account.
- Understand the difference between a personal Facebook account and a business account.
- Create and organize the tools needed for advertising.
- Understand the role of Meta Business Suite and Ads Manager.
- Connect your Facebook Page and Instagram account.
- Prepare your advertising account for running campaigns.

Introduction

Before you can advertise professionally on Facebook and Instagram, you need the right business tools. Many beginners make the mistake of trying to run advertisements directly from their personal Facebook account without setting up a proper business structure. Although it is possible to boost posts from a Facebook Page, businesses that want to advertise consistently and manage campaigns effectively should use Meta's business tools.

Meta has developed a complete business system that allows advertisers to manage Pages, Instagram accounts, advertising campaigns, team members, and business assets from one place. Learning how to set up these tools correctly will save you time, improve security, and make it easier to grow your business in the future.

Think of your Meta Business account as the headquarters of your online business. Just as a physical business has an office where records are kept and decisions are made, your Meta Business account serves as the central place where you manage all your digital marketing activities.

What Is a Meta Business Account?

A Meta Business account is a free platform provided by Meta that helps businesses manage their Facebook Pages, Instagram accounts, advertising accounts, and other business resources. It is designed for individuals, small businesses, large companies, and organizations that want to advertise professionally and manage their online presence efficiently.

A Meta Business account allows you to organize your business assets in one secure location. Instead of switching between different accounts, you can manage everything from one dashboard. As your business grows, you can also give trusted employees or partners access to help manage your advertising without sharing your personal Facebook password.

Personal Facebook Account vs Business Account

Every advertiser must have a personal Facebook account because it is used to access Meta's business tools. However, your personal account is different from your business account.

Your personal Facebook account is intended for communicating with family and friends, sharing personal updates, and participating in social activities. A Meta Business account, on the other hand, is specifically designed for managing business activities such as advertising, customer communication, and marketing campaigns.

Using a business account provides a more professional environment and gives you access to advanced advertising features that are not available through a personal profile alone.

Why You Need a Facebook Business Page

Before you can advertise on Facebook, you should create a Facebook Business Page for your business. A Business Page represents your company, brand, or organization. Customers can visit your Page to learn about your products, read updates, view photos and videos, send messages, and contact you.

Your Business Page should include accurate and professional information such as your business name, logo, description, contact details, business hours, and website if you have one. A complete and well-maintained Page helps build trust with potential customers.

For example, if you own **Kennessy Ebooks**, your Business Page should clearly explain that you provide educational ebooks, digital training materials, and agricultural resources. A professional profile picture, attractive cover image, and well-written business description create a positive first impression.

Why You Need an Instagram Business Account

Instagram is one of the most popular platforms for sharing visual content. Businesses use it to display products, promote services, share customer testimonials, and build brand awareness.

Instead of using a personal Instagram profile for business activities, it is advisable to use an Instagram Business account. A Business account provides additional features such as business contact buttons, advertising options, performance insights, and professional communication tools.

When your Facebook Business Page and Instagram Business account are connected, you can manage both platforms more efficiently through Meta's business tools.

Understanding Meta Business Suite

Meta Business Suite is a management platform that allows businesses to handle their Facebook and Instagram activities from one place. It provides tools for publishing posts, replying to customer messages, scheduling content, viewing performance reports, and managing notifications.

Instead of logging into Facebook and Instagram separately, Business Suite allows you to control both platforms through a single dashboard. This improves efficiency and helps businesses maintain consistent communication with customers.

For example, if a customer sends a message through Facebook while another customer contacts you on Instagram, Business Suite allows you to view and respond to both conversations without changing applications.

Understanding Meta Ads Manager

Meta Ads Manager is the platform used to create, manage, and monitor advertising campaigns. Every professional Facebook and Instagram advertiser should become familiar with this tool because it provides much greater control than simply boosting posts.

Using Ads Manager, you can choose your advertising objective, define your audience, set your budget, determine your campaign schedule, select advert placements, monitor campaign performance, and make improvements based on advertising data.

Ads Manager also provides detailed reports that help you understand how your campaigns are performing. These reports enable you to make informed decisions instead of relying on guesswork.

Preparing Your Business Information

Before creating your first campaign, gather the important information you will need for your business profile. This includes your business name, business logo, business description, email address, phone number, website if available, physical address if applicable, and links to your social media accounts.

Using consistent business information across all platforms helps customers recognize your brand and increases your credibility.

Connecting Facebook and Instagram

One of the advantages of Meta's advertising platform is that you can manage both Facebook and Instagram from one advertising account. Connecting the two platforms allows you to publish content more easily, run adverts across both platforms, and access combined performance reports.

Before launching campaigns, confirm that your Facebook Page and Instagram Business account are properly connected. This helps prevent technical issues later when creating advertisements.

Securing Your Business Account

Your advertising account is a valuable business asset. Protect it by using a strong password for your Facebook account and enabling two-factor authentication if possible. Do not share your personal login details with employees or assistants. Instead, assign appropriate roles through your Meta Business account so that each person has only the access they require.

Regularly review who has access to your business assets and remove access for anyone who no longer works with your business.

Organizing Your Business Assets

As your business grows, you may manage multiple Pages, advertising accounts, Instagram accounts, and websites. Organizing these assets properly makes your work easier and reduces confusion.

Use clear names for your campaigns, advertising accounts, and business resources. Good organization saves time when reviewing reports or creating future campaigns.

Common Mistakes Beginners Make

Many beginners create advertising accounts without completing their business information. Others forget to connect their Facebook Page and Instagram account before launching campaigns. Some use personal profiles instead of Business Pages, while others ignore account security and share passwords with several people.

These mistakes can create unnecessary problems and reduce the professionalism of your business. Taking time to set up your account correctly from the beginning provides a strong foundation for successful advertising.

Best Practices

Always use a professional business name that matches your brand across all platforms. Upload a high-quality business logo and write a clear business description that explains what you offer. Keep your contact information up to date and respond promptly to customer messages. Regularly review your account settings and maintain strong security practices to protect your business.

Chapter Summary

In this chapter, you learned why a Meta Business account is essential for professional advertising. You understood the difference between a personal Facebook account and a business account, the importance of creating a Facebook Business Page and an Instagram Business account, and the roles of Meta Business Suite and Meta Ads Manager. You also learned how to prepare your business information, connect your Facebook and Instagram accounts, organize your business assets, and secure your account for long-term success.

With your business account properly prepared, you are now ready to learn how to create your first advertising campaign and use Meta's advertising tools effectively.

Review Questions

1. What is a Meta Business account?
2. Explain the difference between a personal Facebook account and a Business account.
3. Why is a Facebook Business Page important?
4. What is the purpose of Meta Business Suite?
5. What is Meta Ads Manager used for?
6. Why should businesses protect their advertising accounts?

Practical Exercise

Create a checklist for your own business. Write down your business name, logo, business description, email address, phone number, website (if available), Facebook Business Page, Instagram Business account, and WhatsApp Business number. Check each item and identify any information that is still missing. Complete your business profile before moving to the next chapter so that you are fully prepared to create your first advertising campaign.

CHAPTER 3

Understanding the Meta Advertising System and Choosing the Right Campaign Objective

Learning Objectives

At the end of this chapter, you should be able to:

- Understand how the Meta advertising system works.
- Explain the structure of a Meta advertising campaign.
- Identify the different campaign objectives available in Meta Ads Manager.
- Choose the most suitable campaign objective for your business goals.
- Understand how Meta delivers advertisements to the right audience.
- Avoid common mistakes when selecting campaign objectives.

Introduction

Many beginners believe that creating a Facebook or Instagram advertisement simply involves writing a short message, uploading a picture, and paying some money. In reality, successful advertising requires careful planning. Before an advert is shown to potential customers, Meta needs to understand what the advertiser wants to achieve. This is why every advertising campaign begins by selecting a campaign objective.

A campaign objective tells Meta the purpose of your advertisement. It helps the advertising system deliver your advert to people who are most likely to perform the action you want. If your goal is to receive WhatsApp messages, Meta will try to show your advert to people who are more likely to send messages. If your goal is to increase website visits, the system will focus on people who frequently click links. Choosing the correct objective is therefore one of the most important decisions you will make when creating an advert.

Understanding how Meta's advertising system works will help you create more effective campaigns and avoid wasting your advertising budget.

How the Meta Advertising System Works

Meta uses advanced technology to match advertisements with the right audience. Every day, millions of adverts compete for space on Facebook and Instagram. Instead of showing adverts randomly, Meta analyses information such as user interests, online behaviour, location, previous interactions, and campaign objectives to decide which adverts should be displayed to each user.

When you create an advert, Meta considers several factors before showing it. These include your campaign objective, your target audience, your budget, the quality of your advert, and the likelihood that people will interact with it. This process helps improve the experience for both advertisers and users by displaying adverts that are more relevant to individual interests.

The Three Levels of a Meta Campaign

Every advertising campaign in Meta Ads Manager is organised into three levels: the Campaign level, the Ad Set level, and the Ad level. Understanding these three levels will make it easier to create and manage successful campaigns.

Campaign Level

The Campaign level is where you choose your advertising objective. This is the foundation of your campaign because it tells Meta what you want to achieve. Once the objective has been selected, all other settings are built around it.

Ad Set Level

The Ad Set level is where you define your audience, choose where your adverts will appear, set your advertising budget, and decide how long your campaign will run. This level controls who sees your advert and how your money is spent.

Ad Level

The Ad level is where you design the actual advertisement. Here you upload images or videos, write your headline and advert text, choose your Call-to-Action button, and review how your advert will appear on Facebook and Instagram.

You can think of these three levels as building a house. The Campaign is the foundation, the Ad Set is the structure, and the Ad is the finished house that people see.

Understanding Campaign Objectives

Meta provides several campaign objectives, each designed to achieve a different business goal. Selecting the correct objective increases the likelihood of achieving the results you want.

Awareness

The Awareness objective is designed to introduce your business, product, or service to as many relevant people as possible. It is suitable for new businesses that want more people to recognise their brand. Although Awareness campaigns may not immediately generate many sales, they help build visibility and trust over time.

Traffic

The Traffic objective encourages people to visit a destination such as your website, blog, online store, landing page, or another online location. This objective is useful when your main goal is to increase the number of visitors rather than immediate sales.

Engagement

The Engagement objective encourages people to interact with your content. These interactions may include likes, comments, shares, reactions, event responses, or messages. Businesses often use Engagement campaigns to increase social proof and encourage conversations with potential customers.

Leads

The Leads objective helps businesses collect information from potential customers. This may include names, phone numbers, email addresses, or enquiries submitted through forms or messaging platforms. Lead campaigns are commonly used by schools, consultants, insurance companies, training centres, and service providers.

App Promotion

Businesses that have mobile applications can use the App Promotion objective to encourage users to download and install their apps. Meta delivers these adverts to people who are more likely to install and use mobile applications.

Sales

The Sales objective is designed to encourage customers to make purchases. This objective is suitable for businesses selling physical products, digital products, online courses, subscriptions, or other commercial services. When properly configured, Sales campaigns can optimise delivery towards people who are more likely to complete purchases.

Choosing the Right Objective

Selecting the correct objective depends entirely on your business goals. There is no single objective that is best for every situation.

For example, if you have just started a new business and very few people know about it, an Awareness campaign may be appropriate. If you want people to visit your ebook sales page, the Traffic objective may be more suitable. If your goal is to receive enquiries through WhatsApp, the Engagement or Leads objective may be a better choice. If you already have an online store and want customers to buy products, the Sales objective is usually the most appropriate option.

Always choose the objective that matches the action you want your audience to take.

Example

Suppose you own **Kennessy Ebooks** and you have just published a new ebook titled *How to Start a Profitable Poultry Business in Nigeria with Low Capital*.

If your objective is to let people know the ebook exists, you could choose the Awareness objective. If you want readers to visit your website to read more about the ebook, the Traffic objective may be appropriate. If you want interested people to send you WhatsApp messages before purchasing, Engagement or Leads may be suitable. If customers can purchase the ebook directly from your website, the Sales objective would likely be the best choice.

Each objective supports a different stage of the customer's buying journey.

Why Objectives Matter

Many beginners make the mistake of choosing campaign objectives without considering their business goals. As a result, Meta may optimise the campaign for the wrong type of result.

For example, choosing an Awareness campaign when your main goal is online sales may generate many views but relatively few purchases. Likewise, choosing a Sales objective without having a proper sales process in place may lead to disappointing results.

Successful advertisers understand that the campaign objective should always support the overall business objective.

Common Mistakes

Some advertisers select campaign objectives simply because they sound attractive without understanding their purpose. Others frequently change objectives before collecting enough data to evaluate performance. Some expect every campaign to produce immediate sales regardless of the chosen objective.

Avoid these mistakes by clearly defining your business goal before creating each campaign. Study the available objectives and choose the one that best matches the result you want to achieve.

Best Practices

Before creating a campaign, write down exactly what you want your advertisement to accomplish. Choose only one primary objective for each campaign and allow enough time to evaluate the results. Monitor your campaign reports regularly and compare the outcomes with

your original objectives. As you gain experience, you will become more confident in selecting the most appropriate campaign objective for different marketing situations.

Chapter Summary

In this chapter, you learned how the Meta advertising system works and why campaign objectives are important. You studied the three levels of every Meta advertising campaign: Campaign, Ad Set, and Ad. You also learned about the major campaign objectives, including Awareness, Traffic, Engagement, Leads, App Promotion, and Sales, and discovered how to select the most appropriate objective based on your business goals. Understanding these concepts will help you create more focused and effective advertising campaigns throughout your digital marketing journey.

Review Questions

1. Explain how the Meta advertising system works.
2. Describe the three levels of a Meta advertising campaign.
3. What is a campaign objective?
4. Explain the purpose of the Awareness objective.
5. When should a business use the Traffic objective?
6. Why is it important to choose the correct campaign objective?
7. Mention three common mistakes beginners make when selecting campaign objectives.

Practical Exercise

Imagine you own a business that sells agricultural ebooks online. Choose one product you want to advertise and write down your main business goal. Next, select the campaign objective that best supports your goal and explain why you chose it. Finally, identify your ideal audience and describe the action you want them to take after seeing your advertisement. This exercise will prepare you for creating your first campaign in the next chapter.

Enjoying the preview?

This sample covers only the introduction. The full “Complete Guide to Facebook and Instagram Ads” includes the complete step-by-step system, cost breakdowns, charts and templates you need.
